

CALF VENTILATION

BOOSTS CALF HEALTH AND PERFORMANCE

SPECIFICATIONS:

- Single systems up to 35m long, or more
- Custom air tube with multiple holes to allow for maximum fresh air supply
- Tube design works in all building types
 - including low roof buildings
- Tube length is fully customisable
- Fan speed can be varied with a speed controller

IMPROVE CALF LUNG HEALTH

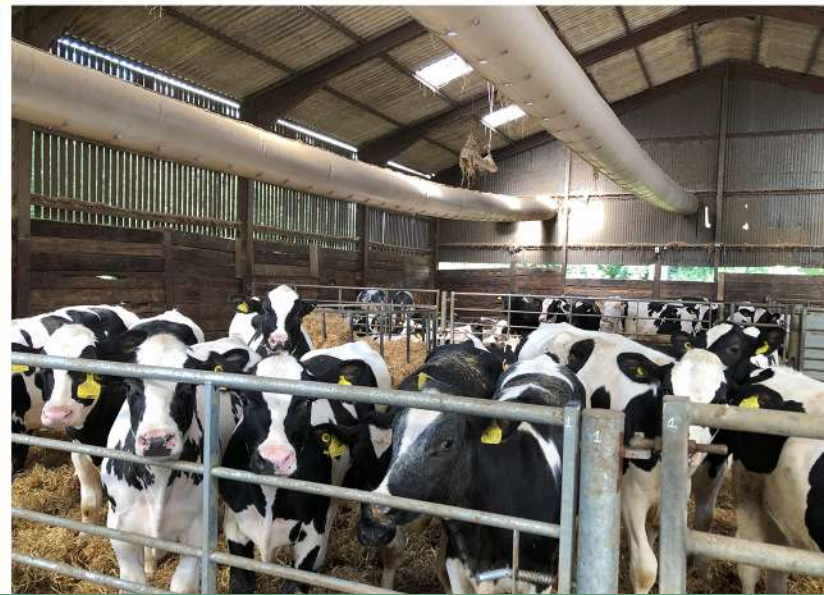

Cow lung health is critical to performance, more so than other farm animals. The JF McKenna Calf Ventilation System provides pneumonia prevention and contributes to overall calf health.

Air vents with multiple air holes distribute fresh air evenly, without causing draughts. This removes harmful bacterial in the air that pass into the calf's lungs.
